PROFESSIONAL SUMMARY

Data Engineer with 6.5+ years building batch and near real-time pipelines on Databricks and PySpark for global retail (Adidas) and energy (TotalEnergies) clients, processing up to ~1 TB/day across Medallion Architecture, Delta Lake, Unity Catalog, Kafka streaming and Change Data Capture (CDC).

TECHNICAL SKILLS

Languages: Python, SQL, Spark SQL
Big Data & Lakehouse: Databricks, PySpark, Delta Lake, Unity Catalog, Medallion Architecture, Spark Structured Streaming, Kafka, Change Data Capture (CDC), ETL
Cloud: Azure Databricks, Azure Data Lake, Azure SQL Server, Azure Cosmos DB, Azure Function Apps, Azure Key Vault, AWS S3
DevOps & Tools: Jenkins (CI/CD), Git, GitHub, Bitbucket

EXPERIENCE

Senior Associate Consultant (Data Engineer) — Infosys Limited, Noida **Feb 2025 – Present**
Client: Adidas | Databricks, PySpark, Spark SQL, Delta Lake, Unity Catalog, AWS S3, Jenkins, Bitbucket

- Built end-to-end ETL pipelines on Databricks Lakehouse (Bronze/Silver/Gold, Delta Lake, Unity Catalog) for Adidas retail finance and sell-out data from 1,200+ global stores and e-commerce platforms, processing ~500K transactions/day.
- Implemented CDC-based incremental loads for Adidas finance and sell-out tables, delivering near real-time updates at ~5–10 min latency.
- Optimized PySpark and Spark SQL transformations in Adidas batch pipelines, reducing runtime by ~35%.
- Engineered Amazon Connect call-transcript pipelines using Structured Streaming, schema evolution and Delta MERGE upserts, ingesting ~200K JSON files/day from AWS S3 across 8 global regions into contact- and transcript-level datasets for agent coaching, sentiment analysis and NLP.
- Maintained 99%+ data accuracy for Adidas finance and sales dashboards and cut the manual reporting effort behind them by ~40%.
- Automated daily deployments of Databricks pipelines using Jenkins and Bitbucket CI/CD.

Systems Engineer (Data Engineer) — Tata Consultancy Services, Noida **Feb 2020 – Jan 2025**
Client: TotalEnergies | Azure Databricks, PySpark, Kafka, Python, Azure Data Lake, Cosmos DB, Azure Function Apps, Azure SQL Server

- Built real-time streaming pipelines with Kafka, PySpark and Azure Databricks, loading ~1 TB/day of TotalEnergies drilling sensor data into Azure Data Lake and Cosmos DB.
- Implemented CDC incremental loads across batch and streaming pipelines and reduced execution time by ~50% through PySpark optimization.
- Delivered curated data feeding well-kick and stuck-pipe risk models, which gave operations teams ~3 hours of early warning to prevent downtime.
- Developed batch reporting pipelines with Python, Azure Function Apps, Azure Data Lake and Azure SQL Server, cutting manual reporting effort by ~30%.
- Automated Databricks job monitoring with Python and Microsoft Teams alerts, saving 1–2 hours of manual checks daily.
- Onboarded and managed six newly hired data engineers.

Hardware Design Engineer — Satyam Software Solutions Pvt. Ltd., Noida **Jun 2019 – Feb 2020**

EDUCATION

B.Tech, Electronics & Communication Engineering — IIMT College of Engineering, Greater Noida (71%) **2015 – 2019**

ACCREDITATIONS, AWARDS & LANGUAGES

Accreditations: Azure Databricks Platform Architect – Databricks (2025) · Databricks Fundamentals – Databricks (2025)
Awards: Star Team Award, Process Improvement Award — Tata Consultancy Services
Languages: English (Professional), Hindi (Native)
